

Global LNG

The global gas market is going through a rapid evolution. Disparate and regionally separate gas markets are being brought together through the expansion of global trade. In this fast-emerging global gas market, Energy Aspects offers a fully integrated service.

We cover all main gas markets, analysing the developments in each market's core fundamentals and price drivers. We have a range of publications which span data analysis, market fundamentals and trends. The service provides globally consistent forecasts of supply and demand balances and prices, with a focus on the front two years of the curve.

Global LNG forms part of the Natural Gas service which also includes European Gas and North American Gas. Together they provide comprehensive analysis of the global market. Alternatively, each region is available as a stand-alone service.

Our global team of experienced analysts delivers the insight, analysis and data relied on by market participants to drive investment decisions and maximise profits.

monthly

Outlook

The monthly Global LNG Outlook studies the dynamics of LNG markets and forecasts how they will develop in the months and years ahead. The report tracks all major features from large LNG terminals and projects through to pricing. With detailed data on the volume and destination of LNG trade flows, as well as a deep dive on a current topic, the report provides comprehensive insight into the importance of LNG for different regions.

Insight

Insight looks at some of the most important issues in the market and covers these in greater analytical depth, analysing their key implications for the traded markets. The topics range widely and include seasonal outlooks, geopolitical issues, supply developments and the impact from specific policy measures. Examples are analysis of China's demand side, India's gas market, and what export projects will advance in the future.
